Available quantity	100

Description

HIGHLIGHTS: Designed for Aputure's all-new Electro Storm point-source fixtures, the Motorized Yoke is an electronic accessory that dramatically increases your workflow efficiency on set. Whether suspended or rigged in hard-to-reach areas, the Motorized Yoke allows for smooth, remote operation of 360º pan and tilt adjustments. Precision control is key on high-end professional film sets. When pairing the Motorized Yoke with the Electro Storm CS15 or Electro Storm XT26, adjusting your light source is now faster and more accurate than ever. Control the pan and tilt of your light directly from the control box or remotely via the Sidus Link app or DMX controls, allowing you to craft the perfect shot – even when your light is rigged in hard-to-reach places. And, do it all without needing additional cables or power supplies.
