Product	Furycube G9 Pro Lightweight Ergonomic Triple Mode Wired/Wireless Gaming Mouse with Charging Dock (White)
SKU	gs-48357624119518
Brand	FuryCube
Category	Peripherals
Minimum order quantity	1
Unit	—
Unit price	$25.00
Available quantity	100

Description

The FURYCUBE G9 Pro is a lightweight, ergonomic wireless gaming mouse designed for performance and user convenience. Core Performance and Sensor: It utilizes the PixArt PAW3311 high-precision gaming-grade optical sensor, capable of reaching a maximum resolution of 22,000 DPI (adjustable via software, with some base models listing 12,000 DPI). This sensor ensures stable, accurate tracking critical for competitive gaming. The mouse achieves a 1000Hz polling rate for a fast, responsive connection, and its low-latency performance is managed by a flagship-grade main control chip. Design and Features: A major highlight is its lightweight construction, weighing in at approximately 60g, designed to reduce fatigue during extended gaming sessions. Its ergonomic, classic design is intended for a comfortable grip across various hand sizes. A distinctive feature is the small LED/OLED screen display, which allows users to monitor real-time mouse dynamics like DPI, battery status, and connection mode without needing to open software. Connectivity and Power: The G9 Pro offers Tri-Mode connectivity, supporting ultra-low latency 2.4G wireless, Bluetooth 5.0, and a wired connection via a detachable USB-C cable. Powering the mouse is a 500mAh lithium battery, providing extended usage. It typically includes a magnetic RGB charging dock for easy, convenient charging and as a sleek desktop base. It also features durable Huanyu mechanical microswitches, rated for a long click lifespan.
