RGBIC Lighting Voice Control APP Control 180 LED Beads Neon TV Backlight Govee Neon TV Backlight More delicate and mesmerizing lighting effects Ordinary Light Strip Lights are dim and not clear enough 10,000,000+Registered Users DIYMode 11 MusicModes 64+ SceneModes RGBICColors Install with Ease Step1 Wipe the back panel of the TV to make sure its surface is dry and clean before attaching the mounting clips. Select the positioning card according to the size of your TV, A or B. Step 2 Stick the positioning card to the back edge of the TV as shown in the image. Install the mounting clips one by one based on the size of the TV as indicated by the positioning cards. Press each clip for 10 seconds to ensure they are fully attached. Step 3 ● For curved back panels, the corner mounting clips may need to be flexed when pressed onto the back panel to ensure they are attached correctly.● Always face the bottom side of the clip with the longer wall to the inner area of the back panel for better lighting effects. Step 4 After installing all the clips, slowly remove the positioning cards. Starting with the mounting clip at the bottom right (facing the back panel), install the strip light on the mounting clips counterclockwise.
