Description

Philips Series 5500 Fully Automatic Espresso Machine EP5547/90 The Philips Series 5500 Fully Automatic Espresso Machine EP5547/90 is designed for coffee lovers who want café-style drinks at home with minimal effort. With 20 hot and iced coffee recipes, LatteGo milk frothing, an intuitive display, and four user profiles, it makes it easy to prepare espresso, cappuccino, latte, iced coffee, and other daily favourites at the touch of a button. Its strongest selling point is the combination of variety, convenience, and easy cleaning. The LatteGo milk system creates silky smooth milk froth and can be cleaned in under 10 seconds, while the ceramic grinder, Aroma Extract system, QuickStart function, SilentBrew technology, and AquaClean filter help deliver a smoother everyday coffee experience. Key Features Fully automatic espresso machine 20 hot and iced coffee beverages LatteGo milk system Silky smooth milk froth at the touch of a button Works with milk and plant-based milk alternatives QuickStart function for faster coffee preparation Hard-wearing ceramic grinder 12 grind settings from fine to coarse Aroma Extract system for balanced temperature, aroma, and crema Extra shot function for stronger flavour without added bitterness AquaClean filter supports up to 5000 cups without descaling Five Eco Settings to reduce water and energy usage Intuitive display for drink selection and customization Adjust coffee strength, coffee length, and milk volume Four user profiles for saved drink preferences SilentBrew technology for quieter operation Quiet Mark certification LatteGo milk system cleans in under 10 seconds Dishwasher-safe or tap-cleanable milk system HomeID app support for guidance and coffee inspiration Black Chrome finish Main Feature Sections 20 Hot and Iced Coffee Recipes The Philips Series 5500 offers 20 drink options, covering hot favourites like espresso, cappuccino, and milky lattes, along with refreshing iced coffee recipes. The brewing system is calibrated so iced coffees still deliver a rich and enjoyable flavour. LatteGo Milk System The LatteGo system uses powerful cyclonic frothing technology to create silky smooth milk froth at the touch of a button. It is ideal for cappuccinos, lattes, and other milk-based drinks, and it can also work with plant-based milk alternatives. Fast Cleaning in Under 10 Seconds LatteGo has only two parts and no tubes, making it one of the easiest milk systems to clean. It can be rinsed under the tap or placed in the dishwasher, helping reduce the daily maintenance usually associated with milk coffee machines. QuickStart Function The QuickStart function helps reduce waiting time by allowing the machine to start brewing based on the selected recipe. This makes it more convenient for busy mornings and daily coffee routines. Ceramic Grinder with 12 Settings The hard-wearing ceramic grinder is designed to bring out the flavour of your coffee beans while offering long-term durability. With 12 grind settings, users can fine-tune the grind from fine to coarse depending on their coffee preference. Aroma Extract System The Aroma Extract system keeps the water temperature between 195°F and 210°F while regulating the water flow rate. This helps balance aroma, crema, and temperature for a consistent cup of coffee. Extra Shot Function The extra shot function allows users to add more flavour to selected coffee recipes without adding bitterness. It is useful for customers who prefer a stronger coffee taste. AquaClean Filter With the AquaClean filter, the machine can brew up to 5000 cups without descaling, depending on usage and filter replacement. The filter purifies water before brewing to help improve coffee taste and reduce maintenance. Eco Settings The Philips Series 5500 includes five Eco Settings to help reduce water and energy consumption. Users can dim lights sooner, reduce rinsing water, enter standby mode faster, and adjust brightness without compromising coffee quality. Intuitive Display and User Profiles The intuitive display lets users select drinks, adjust coffee strength, coffee length, and milk volume, then save preferences into one of four user profiles. This is ideal for households where different people prefer different coffee styles. SilentBrew Technology SilentBrew technology uses sound shielding and quieter grinding to reduce machine noise by 40% compared to earlier models. The machine also comes with Quiet Mark certification for a quieter brewing experience. HomeID App Support The HomeID app helps users learn how to use the machine, discover tips, and explore new café-style coffee recipes for more variety at home.
