Description

Dual Ball Head Bracket 1/4 Screw Magic Arm Clamp The Dual Ball Head Bracket 1/4 Screw Magic Arm Clamp is designed for creators, riders, and photographers who need a flexible mounting solution for cameras and accessories on round rails, handlebars, and support bars. It is useful for motorcycle setups, bicycle mounting, action camera use, and photography accessories that require adjustable positioning. Its strongest selling point is the dual 1-inch ball head design, which allows 360° rotation on both ends. This gives users more freedom to adjust the angle of their camera, light, monitor, or compatible accessory for better shooting flexibility and stable positioning. Key Features Dual ball head magic arm clamp Equipped with 1-inch ball head bases on both ends 360° rotation adjustment 1/4 screw mounting support Suitable for round rails and bars Compatible with motorcycle and bicycle handlebar mounting Thickened inner wall helps increase ball head friction Firm clamping design helps reduce slipping Durable, anti-shock, and stable build Suitable for compatible lightweight camera and photography accessories Main Feature Sections Dual 1-Inch Ball Head Design The bracket is equipped with 1-inch ball head bases on both ends, allowing flexible angle adjustment. This design helps users position their camera or accessory more precisely during shooting. 360° Rotation Adjustment Both ball heads can rotate 360°, making it easier to adjust the mounting angle according to the shooting setup. This is useful for motorcycle filming, bicycle recording, action camera setups, and creative photography angles. 1/4 Screw Compatibility The 1/4 screw mount makes the bracket suitable for many compatible camera accessories and small photography tools. It can be used with accessories that support standard 1/4 screw mounting. Secure Grip for Round Bars The clamp is suitable for round rails and bars, including motorcycle and bicycle handlebars. The thickened inner wall helps increase friction and provides a firmer grip to reduce slipping during use. Stable and Anti-Shock Build Made from quality materials, the bracket is designed to be durable, anti-shock, and stable. This makes it practical for outdoor use, riding setups, and content creation where stable positioning matters. Technical Specifications Product Name: Dual Ball Head Bracket 1/4 Screw Magic Arm Clamp Product Type: Magic arm clamp bracket Mounting Screw: 1/4 screw Ball Head Size: 1 inch Ball Head Quantity: Two ball head bases Rotation: 360° rotation Suitable Mounting Surfaces: Round rails and bars Compatible Use: Motorcycle and bicycle handlebar clamp mounting Grip Feature: Thickened inner wall to increase ball head friction Stability Feature: Firm clamp design to help prevent slipping Build Feature: Durable, anti-shock, and stable Material: Quality materials, exact material not specified Suitable Uses: Action camera mounting, motorcycle filming, bicycle filming, photography accessories, lightweight camera tools
