Product	Philips 5000 Series Hand Blender
SKU	cm-HR2683/00
Brand	Philips
Category	Kitchen & Dining
Minimum order quantity	1
Unit	—
Unit price	$130.00
Available quantity	100

Description

Philips 5000 Series Hand Blender HR2683 The Philips 5000 Series Hand Blender is designed for users who want stronger blending power, smoother results, and better control for daily food preparation. Its strongest selling point is not only the 1200W motor. The real value is the combination of Philips ProMix Technology, SpeedTouch control, anti-splash blade guard, and included attachments. This makes it more capable than a basic hand blender for smoothies, sauces, soups, whipped cream, chopping, and harder ingredients. Key Features 1200W powerful motor Philips ProMix Technology Designed for hard ingredients SpeedTouch variable speed control LED speed indicator Anti-splash blade guard One-touch attachment release Compact chopper included Whisk attachment included Easy rinse-clean design Compact storage-friendly design Suitable for smoothies, soups, sauces, nut milk, frozen fruit, cream, mayonnaise, herbs, nuts, and more Blending Performance 1200W Motor The 1200W motor gives this hand blender strong crushing power for tougher ingredients such as frozen fruit, nuts, and thicker mixtures. Real Buyer Benefit This is the model to position for users who want more power than a basic hand blender, especially for smoothies, homemade nut milk, sauces, and heavier daily blending tasks. ProMix Technology Faster and Smoother Blending Philips ProMix Technology combines a powerful motor, unique blade unit, and optimized splash guard to improve food flow and blending consistency. Cleaner Blending The design helps reduce mess while improving ingredient circulation, giving smoother results with less effort. SpeedTouch Control Variable Speed Trigger SpeedTouch lets users control blending speed by pressing the trigger harder or softer. Why It Matters Starting slowly helps reduce splashing. Increasing power gradually gives better control, especially for soups, sauces, creams, and thicker mixtures. LED Speed Indicator Precise Speed Feedback The LED speed indicator helps users control blending intensity more accurately while preparing different recipes. Anti-Splash Design Splash Guard Blade Design The anti-splash blade guard helps keep the kitchen cleaner during blending. Practical Advantage This is important because splashing is one of the most common frustrations with hand blenders. Attachments Compact Chopper The 0.5L compact chopper is useful for onions, herbs, nuts, meat, and small food preparation tasks. Whisk Attachment The whisk can be used for whipped cream, mayonnaise, pancake batter, salad dressings, and light mixing tasks. One-Touch Release The one-touch button allows users to change attachments quickly without making a mess on the counter. Cleaning & Storage Easy Rinse Cleaning The blending bar can be detached and rinsed under running water for quick cleaning. Compact Storage The hand blender and attachments are designed to save cupboard space.
