Product specification sheet

Product	Mcdodo Magnetic Wireless Car Charger
SKU	cm-CH-7070
Brand	Mcdodo
Category	Car Electronics
Minimum order quantity	1
Unit	—
Unit price	$28.00
Available quantity	100

Description

Mcdodo Magnetic Wireless Charger Car Mount The Mcdodo Magnetic Wireless Charger Car Mount is designed for users who want a cleaner in-car setup with magnetic phone holding and wireless charging in one accessory. Its strongest selling point is not only wireless charging. The real value is the combination of 15W wireless fast charging, strong magnetic hold, 360° angle adjustment, and safe charging indicators. This makes it practical for navigation, calls, music control, and daily driving. Key Features Magnetic wireless car charger mount Supports up to 15W wireless fast charging Works with QC / PD car chargers above 9V Built-in 16 strengthened magnets Strong magnetic suction for stable holding 360° adjustable rotation LED charging indicator FOD foreign object detection alert Compatible with MagSafe-style magnetic cases Suitable for navigation and hands-free viewing Wireless Charging 15W Fast Wireless Charging The charger supports up to 15W wireless charging when paired with a compatible QC or PD car charger. Important Power Requirement To get fast wireless charging, users need a suitable car charger with 9V output or above. A weak car adapter may reduce charging speed. Magnetic Holding 16 Strengthened Magnets The built-in 16 magnets help keep the phone attached more securely while driving. Best Compatibility Works best with magnetic-compatible iPhones, MagSafe cases, or phones using a magnetic ring or magnetic case. 360° Angle Adjustment Flexible Viewing Position The mount supports 360° rotation, allowing users to adjust the phone angle for navigation, calls, music, or passenger viewing. Real Buyer Benefit This improves driving convenience because the phone can be positioned based on the driver’s view and dashboard setup. LED Indicator Charging Light The LED stays on while charging. FOD Alert When foreign object detection is triggered, the indicator light flashes. Why This Matters FOD detection helps alert users when something interferes with safe wireless charging, such as metal objects between the phone and charger. Compatibility Direct Wireless Charging Support Compatible with iPhone 12 series and newer magnetic-style setups depending on case and alignment. Other Wireless Charging Phones Can support wireless charging on compatible models such as: iPhone 8–11 series Huawei Mate 30 / Mate 30 Pro Huawei P30 Pro Xiaomi 10 / 10 Pro / 11 Important Compatibility Note Non-MagSafe phones usually need a magnetic case or magnetic ring to attach properly to the mount.
