Product	Mcdodo USB-C to Lightning Adapter
SKU	cm-OT-7680
Brand	Mcdodo
Category	Accessories
Minimum order quantity	1
Unit	—
Unit price	$8.00
Available quantity	100

Description

Mcdodo Type-C Female to Lightning Male Adapter Black The Mcdodo Type-C Female to Lightning Male Adapter is designed for users who want to connect a USB-C cable to an Apple Lightning device for charging and data transfer. Its strongest selling point is not only the compact adapter design. The real value is convenience: it lets users reuse USB-C cables with Lightning devices instead of carrying separate cables for every device. Key Features Type-C female to Lightning male adapter Supports charging for compatible Apple devices Supports up to 3A current Built-in identification resistor Intelligent current matching Supports charging and data transmission Compact black design Smooth flat interface Portable daily-use accessory Charging Performance Up to 3A Current Support The adapter supports up to 3A current, helping provide stable charging when used with a compatible cable and charger. Important Charging Note Charging speed depends on the charger, USB-C cable, Apple device model, and charging protocol. The adapter alone does not guarantee fast charging on every device. Compatibility For Lightning Apple Devices Designed to connect a USB-C cable to compatible Apple Lightning devices. Practical Use Useful for users who already carry USB-C cables and want to charge Lightning devices without carrying a separate Lightning cable. Safety & Current Matching Built-In Identification Resistor The built-in identification resistor helps match safe current delivery and supports more stable charging behavior. Real Buyer Benefit This helps reduce unstable charging caused by mismatched cables or low-quality adapters.
