Product specification sheet

Product	Anker PowerConf C200 Webcam 2K
SKU	cm-A3369011
Brand	Anker
Category	Peripherals
Minimum order quantity	1
Unit	—
Unit price	$69.00
Available quantity	100

Description

Anker PowerConf C200 Webcam The Anker PowerConf C200 is designed for users who want sharper video quality, better meeting control, and stronger privacy than a basic laptop webcam. Its strongest selling point is not only 2K resolution. The real advantage is the combination of ultra-clear video, adjustable field of view, customizable microphone pickup, built-in privacy cover, and AnkerWork software control. This makes it a strong option for office meetings, remote work, online classes, interviews, and content calls. Key Features Ultra-clear 2K video quality Adjustable field of view 65°, 78°, and 95° viewing angles Directional and omnidirectional voice pickup Built-in privacy cover AnkerWork software support Better image sharpness than standard 1080p webcams Designed for meetings, calls, and remote work Video Quality 2K Resolution The PowerConf C200 delivers sharper video than standard 1080p webcams, helping improve clarity during meetings and video calls. Real Buyer Benefit Sharper video makes the user look more professional, especially in business calls, online meetings, interviews, and remote work setups. Adjustable Field of View 65° Field of View Best when users want to show mostly their face and reduce background visibility. 78° Field of View A balanced option for standard meetings and desk setups. 95° Field of View Useful when users want to show more of the room, include another person, or present a wider workspace. Microphone Control Directional Pickup Focuses more on the user’s voice and helps reduce unwanted background sound. Omnidirectional Pickup Captures sound more broadly, useful when multiple people are speaking in the same room. Privacy Protection Built-In Privacy Cover The sliding privacy cover physically blocks the lens when the webcam is not in use. Why It Matters This gives users better control and confidence, especially for work-from-home setups where the camera is always connected. Software Support AnkerWork Software The AnkerWork software allows users to manually adjust field of view and other webcam settings. Real Advantage Software control gives more flexibility than fixed webcams, especially when users change between personal calls, team meetings, and presentation setups.
