Kenwood Titanium Chef Baker XL Silver KVL85.124SI The Kenwood Titanium Chef Baker XL KVL85.124SI is designed for serious home bakers who want precision, power, and smoother preparation in one premium kitchen machine. Its strongest selling point is not only the 1200W motor. The real advantage is the built-in EasyWeigh™ scale, DuoBowl™ system, and delicate fold function. These features reduce mess, save time, and make baking more accurate from the start. Key Features 1200W digitally controlled motor Built-in EasyWeigh™ weighing scale Direct-to-bowl weighing 7L stainless steel mixing bowl 5L stainless steel nesting bowl DuoBowl™ system LightLift head design Delicate fold function Stainless steel mixing tools included Splashguard included Suitable for dough, cakes, mousses, meringues, and baking mixes Baking Performance 1200W Motor The digitally controlled 1200W motor adjusts power based on the mixture, helping handle everything from light batters to heavier doughs and fruit cake mixes. Smart Power Control Instead of using unnecessary force, the motor delivers the power needed for the task. This improves consistency and gives better control during mixing and kneading. EasyWeigh™ Scale Direct-to-Bowl Weighing EasyWeigh™ allows users to weigh ingredients directly into the mixing bowl, either incrementally or individually. Real Buyer Benefit This reduces extra bowls, limits countertop mess, and improves baking accuracy. For baking, precision matters more than guesswork. DuoBowl™ System 7L + 5L Bowls The machine includes a 7L stainless steel bowl and a 5L stainless steel bowl nested inside it. Why It Matters Many recipes need more than one bowl. The DuoBowl™ system makes it easier to prepare multiple mixtures without stopping to wash one bowl in the middle of the recipe. LightLift Head Easy Ingredient Access The LightLift head makes it easier to lift the mixer head and add ingredients during preparation. Practical Advantage This improves workflow, especially during recipes that require staged mixing or gradual ingredient additions. Delicate Fold Function Gentle Mixing Control The fold function is designed for delicate mixtures like meringues, mousses, whipped cream, and light batters. Real Benefit This helps protect air and texture, which is critical for successful baking results.
