SKU	cm-AS8930E51
Brand	Remington
Category	Hair Care
Minimum order quantity	1
Unit	—
Unit price	$169.00
Available quantity	100

Description

Remington AIRvive 2-in-1 Air Styler Dry, smooth, and style your hair in one step—without extreme heat damage. The Remington AIRvive 2-in-1 Air Styler combines gentle airflow with ceramic styling plates to give you smoother, healthier-looking hair with less frizz. With two smart styling modes, you can go from wet hair to styled results or refresh your look anytime. Ionic Air Technology reduces static and locks in up to 80% smoother results, while heat-activated micro-conditioners protect your hair all day. Perfect for fast, effortless styling with salon-like results at home. Two styling modes with Ionic Air Technology Two styling modes mean that the AIRvive™ 2-in-1 Air Styler can be used to both dry and smooth damp hair, as well as straighten and style dry hair. Fresh out of the shower? Use Wet Mode on hair that’s been towel-dried and combed through to remove any tangles. The concentrated stream of gentle, warm air works in combination with the low temperature of the styling plates to dry and straighten your hair in a single step without extreme, damaging heat. You’ll love how the AIRvive™ 2-in-1 Air Styler transforms and simplifies your styling routine and how your hair looks and feels afterwards. Drying and straightening simultaneously helps preserve your hair’s natural moisture for up to 24 hours1 locking in a soft feel. For pesky hard-to-style strands or to refresh your style between washes, switch to Finishing Mode. This converts the Air Styler into a heated straightener by reducing the airflow and boosting the temperature of the styling plates. While styling, Ionic Air flows through vents on the plates, distributing millions of ions to help eliminate static and instantly cools your hair to lock-in 80% smoother results Heat activated micro-conditioners with NEW anti-frizz formula Glide towards an effortlessly smooth style that lasts all day³. Our innovative blend of conditioners is embedded within the microscopic pores of the ceramic that coats the styling plates. When the ceramic is heated the conditioners are activated by the change in temperature and released onto the hair on each pass, creating a barrier that helps to protect against humidity and other environmental factors that can cause frizz throughout the day. Actively cooled curved casing The AIRvive™ 2-in-1 Air Styler offers more than just one look. When using finishing mode, experiment with bouncy curls, flicks or waves with control and ease thanks to the curved casing that’s actively cooled with the airflow. Key Features: 2-in-1: dries & styles in one tool Wet Mode: dry & smooth damp hair without extreme heat Finishing Mode: straighten & style dry hair Ionic Air Technology reduces frizz & static Up to 80% smoother hair results Helps maintain natural moisture up to 24 hours Ceramic plates with heat-activated micro-conditioners Anti-frizz protection throughout the day Curved design for curls, waves, or straight styles Lightweight and easy to use Model AS8930E51
